## INITIAL DAMAGE REPORTING

Accurate and timely damage reporting is crucial to successfully requesting and receiving federal assistance in the form of either low-interest loans or grants to help Pennsylvania's infrastructure recover from a disaster. The recovery process begins with the identification of damages at the local level and the expeditious reporting of those damages within the emergency management channels. Reporting how the damage impacts your municipality is also important.

The seminar is open to elected officials, Borough, Township and City Managers, Public Works and local Emergency Management Coordinators.
